

Paessler PRTG UVexplorer: From Alert to Resolution

Faster than Ever

Featuring automatic topology, clear dependency visualizations, and configuration change tracking, PRTG UVexplorer means fewer surprises, faster answers, and less downtime.

Automated Network Topology

No manual mapping, no guesswork. Always-current Layer 2 & 3 maps, built automatically from real data.

Dependency Visualization

See the area to investigate and the impact of any failure in one click on the topology map – no manual tracing needed.

Configuration Backup & Comparison

Automatically backs up device configurations and enables comparison across scheduled discoveries.

Network Change Tracking & Alerting

Detects topology changes and alerts you when differences are found.

Key Benefits

All topology and config data accessible from within PRTG

Instant blast-radius assessment when a device goes down

Change history that connects incidents to what actually changed

One vendor, one renewal – less tool sprawl for your team

Point-in-time config snapshots for audit and compliance support

Always-current network documentation – no manual updates

Faster troubleshooting – with full visual context during incidents

Lower MTTR – identify the blast radius of a failing device in seconds
